Secure connections examples

Application Layer	Email – Pretty Good Privacy
Transport Layer	Secure Socket Layer
Network Layer	Ipsec (VPN)
DataLink Layer	Wifi – WEP (not part of curriculum)
Physical Layer	N/A

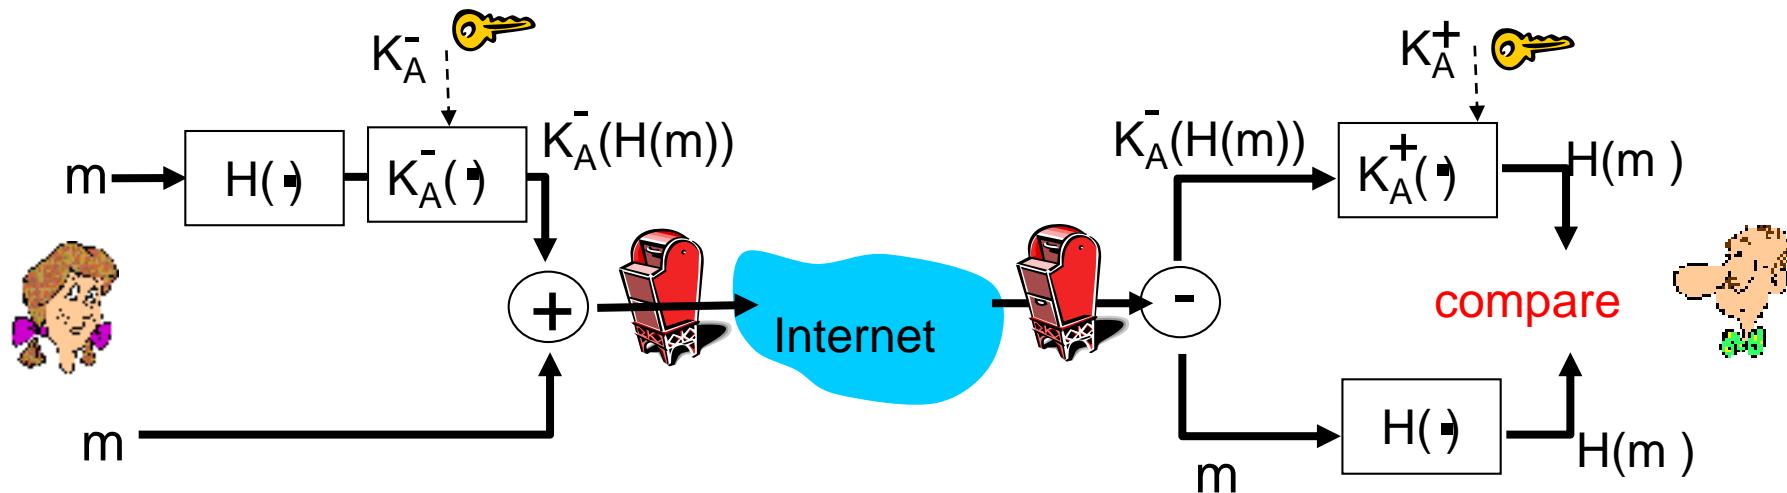

Secure Application layer email - PGP (Pretty Good Privacy)

**Alice wants to
send confidential e-mail, m , to Bob**

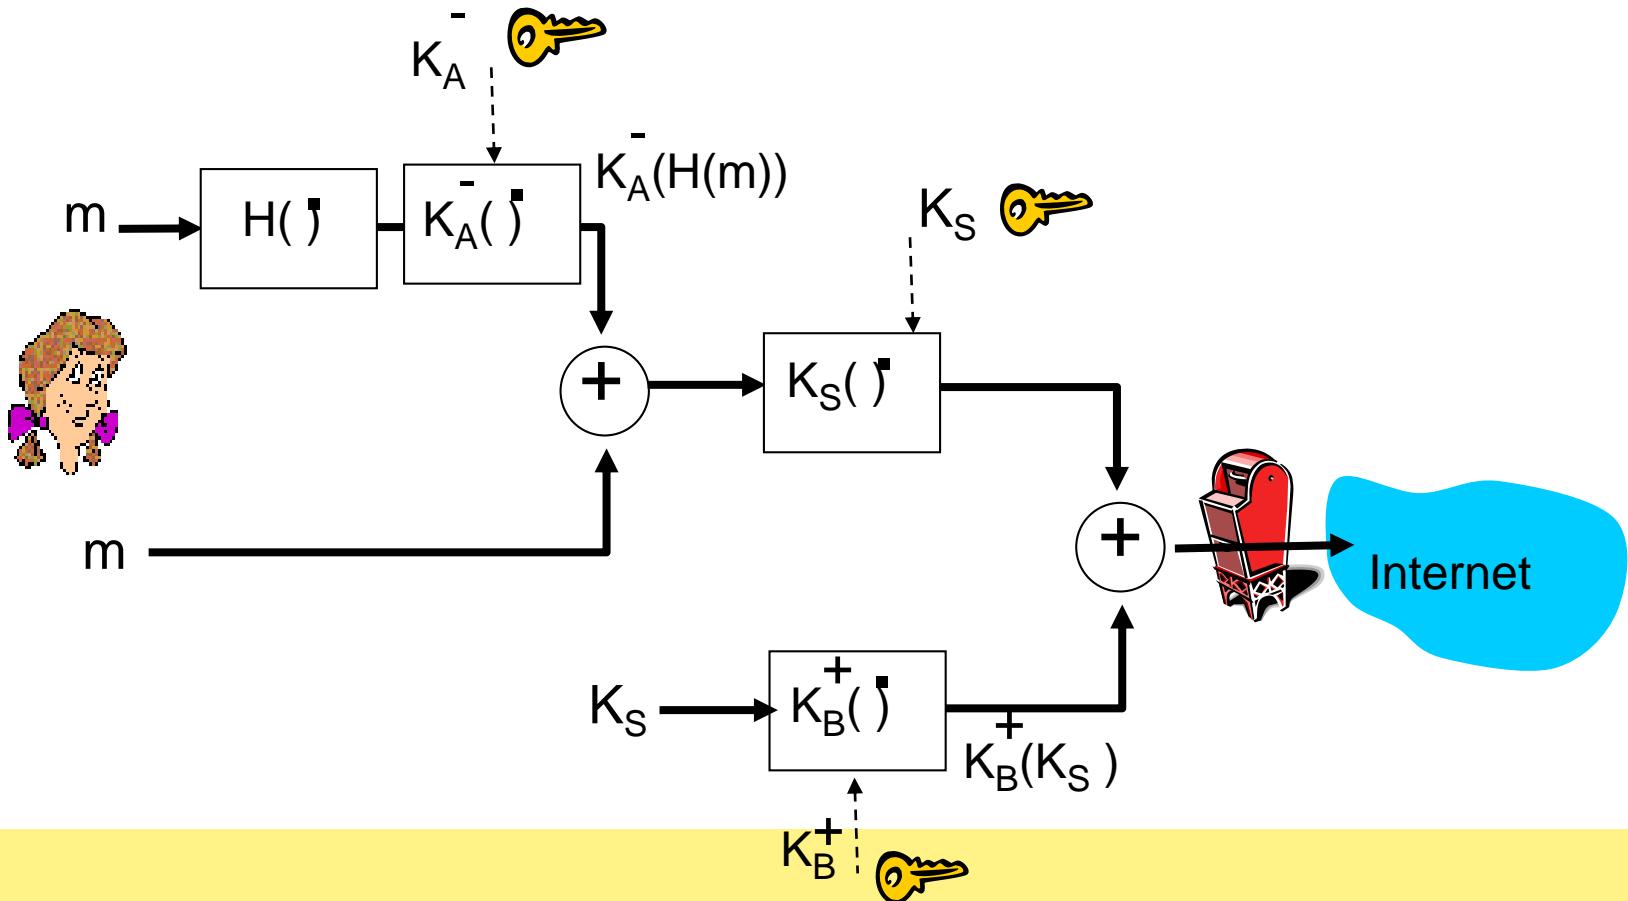

Secure Application layer email - PGP (Pretty Good Privacy)

**Alice wants to provide
sender authentication message integrity**

Secure Application layer email - PGP (Pretty Good Privacy)

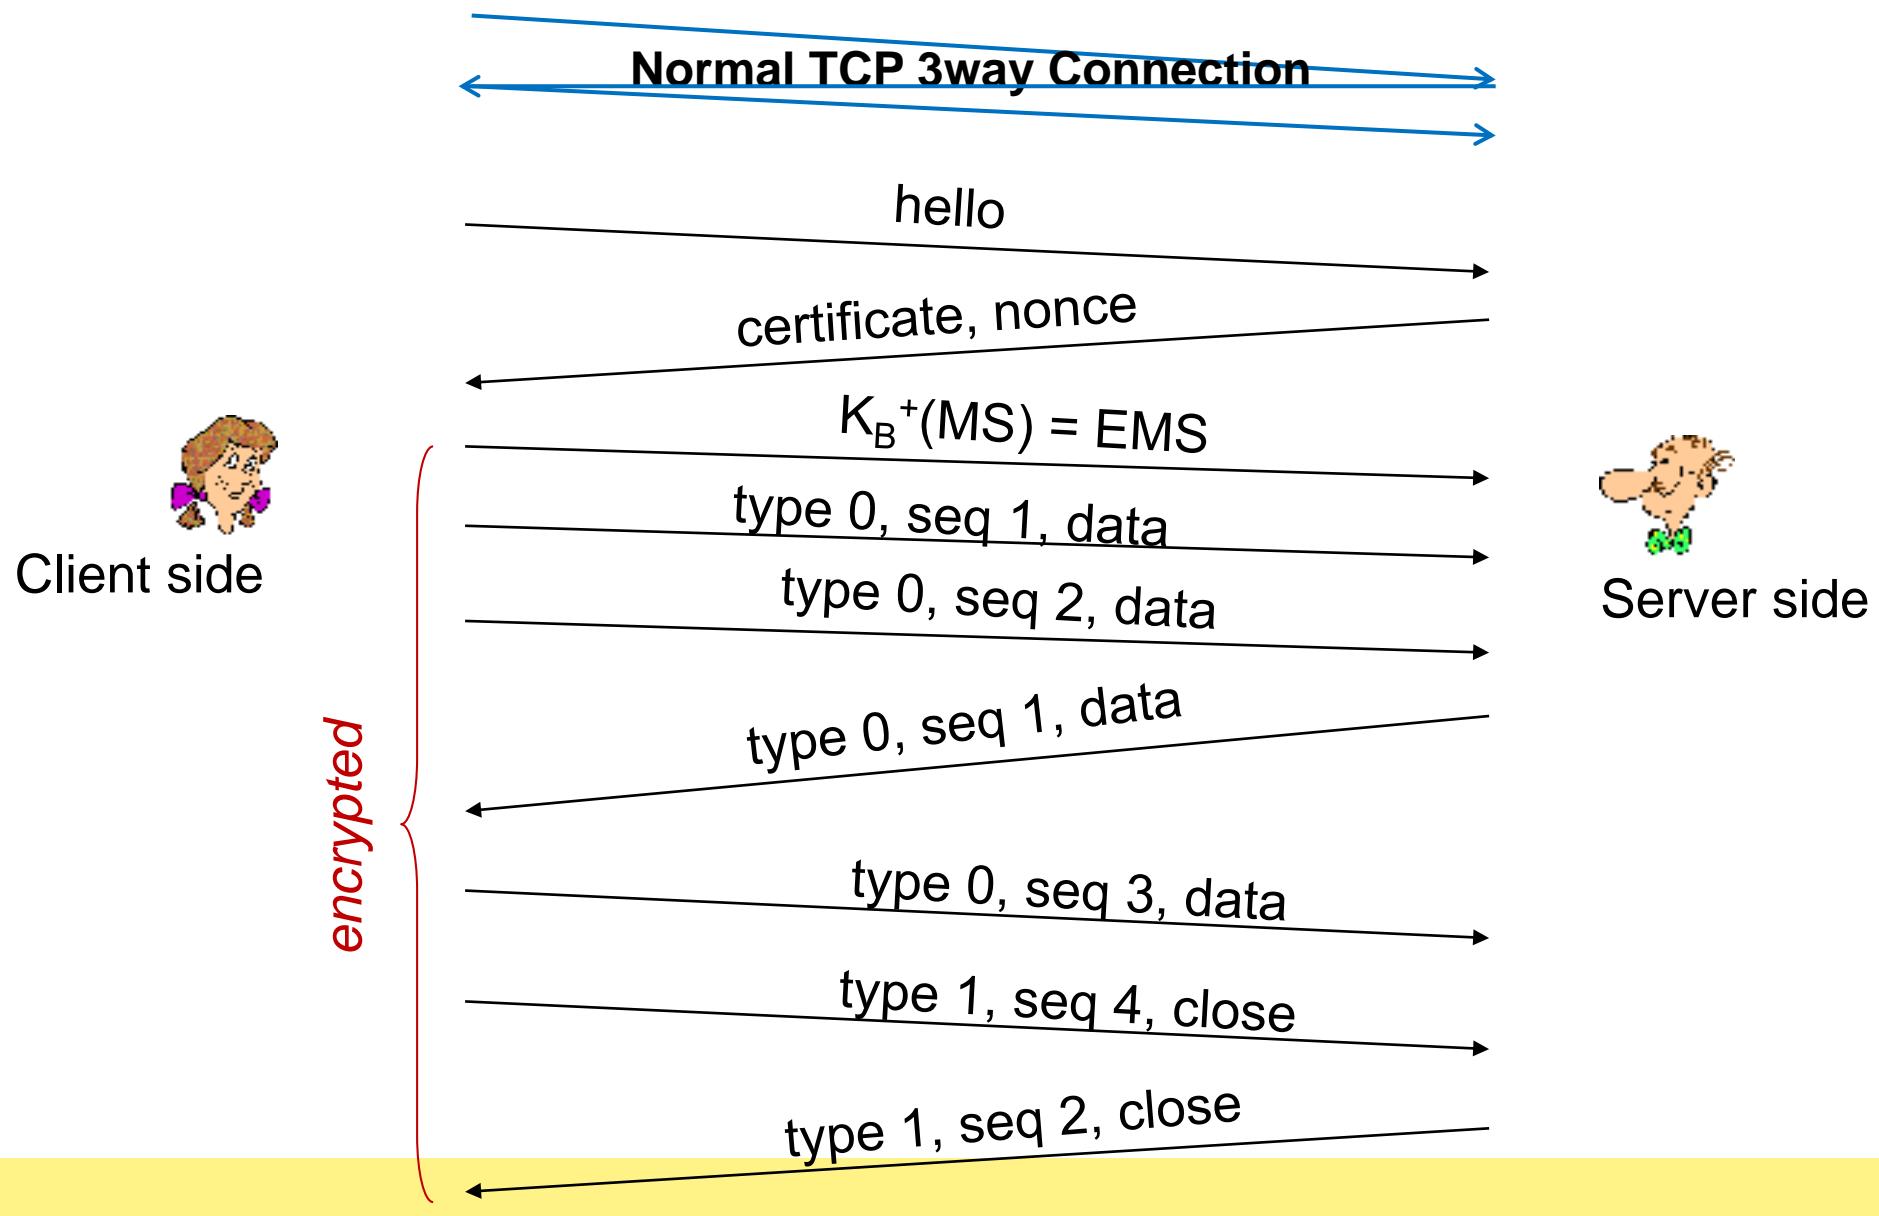

Alice wants to provide sender authentication message integrity and a confidential email

Secure Transport layer - Secure Socket Layer (SSL)

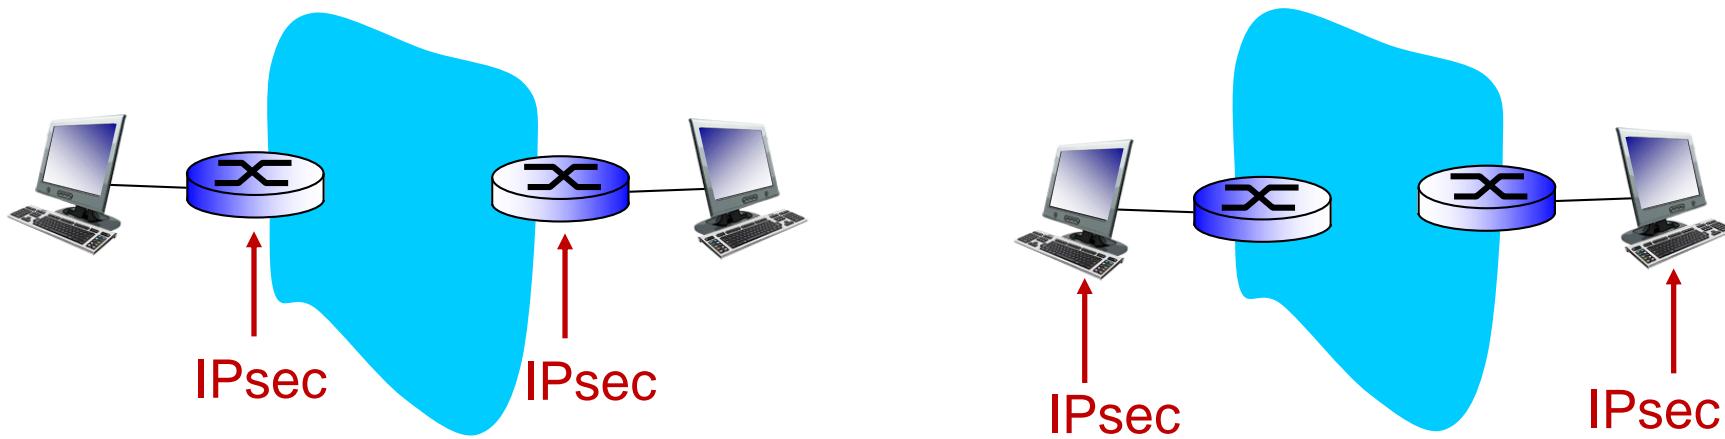

- SSL support Confidential (HTTPS is based on SSL)
- SSL *can* support *Integrity*
- Four keys (part of EMS – Encrypted Master Secret):
 - K_c = encryption key for data sent from client to server
 - M_c = MAC key for data sent from client to server
 - K_s = encryption key for data sent from server to client
 - M_s = MAC key for data sent from server to client

Secure Transport layer - Secure Socket Layer (SSL)

Secure Network layer

IPsec (Virtual Private Network - VPN)

- edge routers IPsec-aware (tunnel)
- ❖ hosts IPsec-aware

Secure Network layer

IPsec (Virtual Private Network - VPN)

- **Authentication Header (AH) protocol**
 - provides source authentication & data integrity but *not* confidentiality
- **Encapsulation Security Protocol (ESP)**
 - provides source authentication, data integrity, *and* *confidentiality*
 - more widely used than AH

IPsec (Virtual Private Network - VPN)

SA – or VPN as tunnel - the most often used security at Network layer
